The Washing Machine that Works Like Human Hands—the "EASY"

obligation.

The "EASY" Vacuum Electric Washing Machine is the nearest mechanical approach to the natural principle of careful hand washing. The two vacuum cups take the place of two human hands, driving soapy water by air pressure through the mesh of the garments and on the up stroke sucking it back through the fabric at the rate of sixty times per minute. Before starting on the down stroke they take a different position, so that the air pressure and suction reaches all the clothes in the round copper tank. The "EASY" is simple in construction; anyone can understand and operate it. It has capacity for large or small washings-occupies small floor space. It is readily loaded and unloaded and will do the heavy washing on blankets and woolens, leaving them soft and pleasant to the touch and will wash with equal success the daintiest laces, the speerest fabrics, without damage, wear or tear. All mechanism, including a sturdy G, E. motor, is suspended from an iron base under the round copper tank. The three legs are fitted with swivel castors, and with little effort the machine may be moved from place to place. It is fitted with a swinging electric wringer, and with a gas heater, if desired, to heat the water to any desired Any dealer in the following list will be glad to give you a free demonstration with your next washing in your own home.
